

Our Products

HEAVY MEAT BROILER CHICKS

White Rock Meat (Broiler): White in colour. Fastest growing and bred for meat only. White Rocks can be butchered at a range of weights but are typically grown for 8-12 weeks. With the correct care, White Rocks will achieve excellent results.

Bonnie's Heavy Red (Broiler): Considered a broiler type, this breed is slower growing than the White Rock, more resistant and less prone to leg and heart problems. Well suited to free ranging. Bonnie's Heavy Reds are predominantly red, with a slight degree of variance in feather colour and pattern. Finished weights are dependant upon the type of feed used, feeding program, length of growing period and overall management of the birds. Allow 12 or more weeks to finish.

WHITE EGG LAYERS

White Leghorn: This small white hen is capable of laying 90% or better with an excellent feed conversion. Their eggs are white and have an excellent eggshell quality.

BROWN EGG LAYERS

I.S.A. Brown Hybrid: Our most popular layer breed. Brown in colour, the pullets of this breed are excellent brown egg producers. Genetically bred for laying ability on a low feed consumption, this breed will lay approximately 92% during peak production, with good quality eggs of exceptional size. The hens will reach approximately 4lbs with the rooster weighing approximately 5-6lbs at maturity.

DUAL-PURPOSE BREEDS

These breeds are very quiet, disease resistant and lay very large brown eggs. Considered to be dual-purpose since they are grown for eggs and meat. For the hobbyist, who would like a variety of colour for their backyard, consider a mix of these breeds.

Rhole Island Red x Columbian Rock: The female is red in colour, weighing approximately 4.5lbs at maturity. The male is mostly white with black and brown wing and tail feathers. He will grow to approximately 6.5lbs.

Black Sex Link: Pullets are black with red under-feathers, reaching a weight of 5.75lbs. Males have a barred pattern of grey and white, similar to the Barred Rocks.

Plymoth Barred Rock: An outstanding dual purpose bird. The females and males are similar in colour, with grey and white bars. Females will reach 4-5lbs, while the male will reach up to 6lbs or better. These birds are very beautiful.

TURKEYS

Large White Turkeys: Offered as **non-sexed ONLY**. This breed will achieve exceptional size. The hens will grow to a dressed weight of 16-20lbs in 15-20 weeks, and the toms will grow to 23-33lbs in 15-20 weeks. It is possible to have a 35-42lbs male with a few additional weeks of feed.

READY TO LAY PULLETS

I.S.A. Brown only: Available at 19 weeks of age. All birds will be beaked trimmed and fully vaccinated. Pullets will only be available on specified dates throughout the season. **Please order early to avoid disappointment.**

WATERFOWL

Available April – May – June ONLY

White Pekin Ducks: Both the male and female are creamy white in colour, yellow skinned, and very large breasted. Quite fast growing, Pekins can be dressed at 8 weeks on heavy feed, but most people feed reasonable rations for slower growth. For the customer who does not intend to process them at a young age, these ducklings will do well when fed less grower and allowed to fend for themselves around the pond and backyard.

Rouen Ducks: Very attractive and similar to the Wild Mallard in colour. They make excellent ducks for the freezer when matured and fattened in the fall.

Muscovy Ducks: White in colour, these ducks eat less than Pekins and are excellent fly catchers. The drake is twice the size of the female, reaching 10-11lbs at 17-18 weeks. This bird has more breast meat, smaller bones and has less fat than other ducks.

EMBDEN GEESE

Large and pure white in colour, Geese will graze on pasture, but they also require whole grains. If no green pasture is available, then geese need to be fed a full ration of grain. The better the pasture the less feed required. They are also excellent weeders.
